PROFESSIONAL SUMMARY

DevOps and Cybersecurity engineer bridging security operations, cloud infrastructure and applied AI. Certified Ethical Hacker (CEH) with hands-on experience in SIEM monitoring, vulnerability assessment and incident response, now applying that foundation to DevSecOps and cloud infrastructure as a DevOps Engineer at Stackly. Founder of CipherAI, a production AI SaaS platform integrating LLM APIs, authentication and payments for a live, revenue-generating client. Builder of SentinelCore and AegisAI, open-source AI threat gateways for prompt-injection defence. Targeting AI Engineer, AI Security Engineer, DevSecOps and Cloud/Security roles.

CORE SKILLS

AI & LLM Security: Prompt-injection and jailbreak detection, LLM guardrails, MCP tool-poisoning checks, AI red teaming (garak, PyRIT), OWASP LLM Top 10, MITRE ATLAS, NIST AI RMF, detection engineering, evaluation harnesses.

Cloud, DevSecOps & MLOps: AWS, GCP, Docker, CI/CD pipelines, Kubernetes (in progress), Linux administration and hardening, Git/GitHub, dependency and secret scanning, pip-audit, dataset validation, regression testing.

Security Operations: SIEM monitoring, incident response, vulnerability assessment (VAPT), threat monitoring, penetration testing, malware analysis, endpoint security, TCP/IP, DNS, firewalls, Splunk, ELK Stack, Wireshark, Nmap, Metasploit, Burp Suite.

Development: Python, Bash, JavaScript/TypeScript, React, FastAPI, PyTorch, scikit-learn, Firebase, Supabase, LLM API integration (OpenAI, OpenRouter).

PROFESSIONAL EXPERIENCE

DevOps Engineer March 2026 – Present
Stackly

- Manage cloud infrastructure and CI/CD pipelines supporting scalable backend deployment.
- Operate and maintain containerised applications with Docker to improve system reliability and deployment consistency.
- Drive DevOps and DevSecOps practice across build, release and deployment workflows.

Founder & Engineer 2025 – Present
CipherAI — cipherai.in

- Architected and built a multi-product AI SaaS platform spanning LLM chat, image and video generation, cybersecurity education, a job portal, hackathons and certification systems.
- Integrated LLM APIs (OpenAI, OpenRouter) with Clerk authentication, Firebase Firestore and Supabase storage to power 50+ AI tools on a credit-based usage system.
- Implemented Razorpay payment processing and an admin dashboard for user, job and certificate management; delivered the platform to a real paying client, generating revenue from a live production SaaS product.

Cybersecurity Intern

2024

Tata Consultancy Services

- Conducted vulnerability assessments and risk analysis for enterprise systems, identifying security gaps across infrastructure.
- Monitored security alerts using SIEM tooling, supported incident triage and response, and prepared technical reports on remediation steps.

Cybersecurity Intern

2024

CFSS Pvt Ltd

- Assisted penetration testing and ethical hacking exercises across web and network applications.
- Performed Linux system hardening and configuration security reviews, and documented secure operational procedures.

KEY PROJECTS

SentinelCore — AI Threat Gateway

Open source

Python 3.11, FastAPI, SQLite, Docker, pytest

- Model-agnostic security layer between AI applications and their models, tools and data sources; inspects prompts, documents, tool calls and model output.
- Detects prompt injection, obfuscation (zero-width, bidirectional text, homoglyphs, encoding), PII and secrets, and MCP tool-poisoning; enforces allow / warn / sanitise / approve / block policy.
- 96.8% detector precision across 744 labelled examples, with an attack-replay lab tracking detector improvements across versions; OpenAI-compatible reverse proxy with queryable SQLite audit trails.

AegisAI — LLM Threat Detection Engine

Open source

Python, FastAPI, scikit-learn, joblib

- Layered detection architecture where deterministic rules retain authority over bounded ML evidence, producing transparent 0–100 risk scores with explainable findings.
- Classifies nine threat intents and separates malicious intent from legitimate defensive security education; trained across roughly 399K labelled examples with leakage detection and cross-dataset evaluation.
- 112 passing tests with automated regression testing and dataset validation tooling.

NeuroGenesis — Reasoning Verification Framework

Research

Python, PyTorch, symbolic methods

- Converts LLM reasoning into structured representations and independently checks logic, factual and constraint violations before an answer is accepted.
- Implements a reasoning-shortcut oracle that enumerates shortcut spaces before training, testing whether identifiability predicts correct concept learning.

Security Operations Centre (SOC) Home Lab

Lab

ELK Stack, Splunk, detection engineering

- Deployed ELK and Splunk SIEM stacks, configured detection alerts, simulated real-world attacks and documented end-to-end incident-response workflows.

Endpoint Monitoring & Malware Analysis Lab

Lab

Python, sandboxing, automation

- Built an isolated sandbox environment to safely analyse malicious software behaviour and evaluate defensive countermeasures.

- Built a tool detecting unauthorised USB/device activity to prevent data exfiltration, plus Python scripts automating log analysis and network scanning for faster threat detection.

CERTIFICATIONS

Certified Ethical Hacker (CEH) • Linux Foundation: DevSecOps • Linux Foundation: Linux Essentials • Google Cloud Computing Foundations • Python and AI Certifications • CompTIA Security+ and Network+ (in progress)

EDUCATION

B.Tech, Computer Science and Business Systems

2025

Rajalakshmi Institute of Technology, Chennai

ACHIEVEMENTS

- Solved 100+ Capture the Flag (CTF) challenges across multiple platforms.
- Runner-up, National Cybersecurity Hackathon.
- Ranked in the top 3% globally in security competitions and on TryHackMe.
- Generated revenue from a live production AI SaaS product delivered to a paying client.
